3511/50

LCR robusto e basilare, 2 frequenze fisse 120Hz - 1kHz
LCR sturdy and compact, 2 fixed frequencies 120Hz - 1kHz

3511/50 offre prestazioni di tutto rispetto, misurazioni ad alta velocità con tempo minimo di misura di 5msec e precisione di base $\pm 0,08\%$.

È idoneo per l'utilizzo in linea di controllo, in laboratorio nonché inserito in macchine automatiche di produzione e test.

Compatto, molto robusto, interfaccia a LED semplice ed efficace.

EXT I/O ed RS232 in dotazione, GP-IB opzionale.

3511/50 offers respectable performance, high speed measurements with minimal time measurement 5msec and basic accuracy $\pm 0.08\%$.

Typically used on quality control lines, in laboratory or installed in automatic machines for production and test.

Compact, very robust, LED display simple and practical.

EXT I/O and RS232 included, optional GP-IB.

Better Speed, Better Accuracy

Powerful Functions for Greater Line Efficiency

■ Minimum measurement time of 5 ms

Three sampling rates can be selected: FAST, NORMAL and SLOW. The minimum measurement time of 5 ms (with 1 kHz/|Z| display) gives rapid sampling for improved production line efficiency.

(Differs with the measurement frequency and display parameters.)

■ High resolution and high measurement accuracy

The measurement resolution provides a full five digits, and the basic measurement accuracy is $\pm 0.08\%$.

■ RS-232C interface as standard feature

With the exception of turning the power on or off, all the basic functions can be controlled from a PC. Use of a PC enables efficient data management, processing, and setting of measurement conditions, plus a variety of other functions. A GP-IB interface can also be installed as an option.

■ RS-232C interface specifications

Transmission method: Start-stop synchronization. Transmission speed: 9600 bps. Data length: 8 bits. Parity: None. Stop bit: 1 bit. Delimiter: CR+LF. Handshake: Hardware. Connector shape: D-sub 9pin (male). Connecting cable: Reverse cable

■ EXT.I/O

Trigger signals, recording ON/OFF, and loading of measurement conditions can be externally controlled. Complete interface allows the unit to be used as an automatic instrument where comparator results, measurement-completed signals, etc., can be output to an external device.

Timing chart for EXT. I/O sequencing

The following chart shows the timing sequence of the trigger (TRIG), and end-of-measurement (EOM) signals from the EXT. I/O connector.

EXT. I/O signals	
● Outputs	● Inputs
• Internal DC power (+5 V output)	• External DC power supply (+5 V to +24 V can be supplied by external device)
• Comparator result (main-/sub-parameters together with AND output)	• External trigger signal
• Analog measurement completion	• Memory setting selection (including comparator conditions)
• End-of-measurement	

■ Comparator function

Upper limit and lower limit values can be set for both the main parameters (any of Z or C or L or R) and sub-parameters (any of θ or D or Q). The measurement results are signaled by a buzzer and LED indication and can also be output to an external source. The output is separated into main- and sub-parameter measurement results together with AND.

■ Memory for 99 sets of measurement conditions

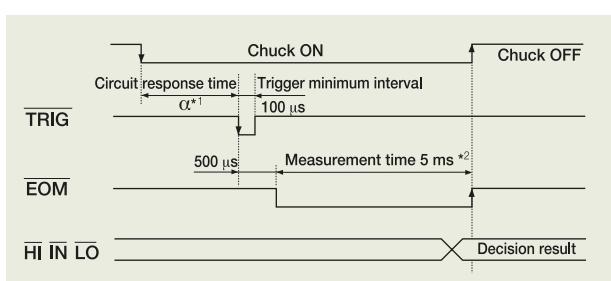

Up to 99 sets of measurement conditions, including comparator values, provide rapid response to constantly changing components on flexible production lines.

These conditions can also be externally switched via the EXT.I/O.

■ Compact size

The small dimensions, 210 (W) \times 100 (H) \times 168 (D) mm, approximately 2.5 kg (4.00"W \times 8.30"H \times 6.60"D; 88 oz. approx.), make it easy to incorporate the instrument into production lines.

The AC power supply voltage is selectable : 100 V, 120 V, 220 V or 240 V AC.

*1 α depends on the sample and trigger delay.

*2 Reference value for 1 kHz measurement frequency,

FAST mode, |Z| measurement.

Measurement time differs with measurement conditions.

... and Better Size !

Basic Performance

■ Seven parameters measured

The seven parameters $|Z|$, R, θ , C, L, D, and Q can be measured. The main- and sub-displays can be combined in five ways: $|Z|$ - θ , C-D, L-D, L-Q, R.

■ Easy operation by simple selections and LED display

To operate, simply select from the items displayed on the panel. Selected measurement conditions are indicated by illuminated LEDs allowing settings to be checked at a glance. Measurement results are also displayed by LED indication that makes it easy to check the values even in dark locations.

■ DC bias measurement

Using the optional 9268/9269 DC BIAS UNIT, voltage and current bias measurements are simple.

The 9268 can be used for voltages up to a maximum of DC \pm 40 V. The 9269 can be used for currents up to a maximum of DC \pm 2 A.

Example of connecting the 9262 and 9268 / 9269

■ Measurement signals

Measurement frequency: 120 Hz/1 kHz. Signal level: 50 mV, 500 mV, 1 Vrms settable.

■ Printer output

Measurement values and comparator results can be printed out on the optional 9442 Printer by connecting this via the standard RS-232C interface. This is convenient for attaching data to inspection reports, etc.

(The optional 9444 Connection Cable and AC adapter are necessary for connecting the printer.)

■ 9442 PRINTER specifications

● Printing method : Thermal serial dot printer ● Recording width : 112 mm (4.41") ● Printing speed : 52.5 cpx ● Power supply : 9443 AC ADAPTER or supplied Ni-MH battery pack (prints 3000 lines on full charge from 9443 AC ADAPTER) ● Dimensions and mass: 160W x 66.5H x 170D mm; 580 g approx. (6.30"W x 2.62"H x 6.70"D; 20.46 oz. approx.)

Resulting measurement data can be output not only to a printer, but also other media such as a PC or sequencer. Using the RS-232C interface makes transferring the inspection data simple and convenient.

Measurement accuracy and range

Conditions of guaranteed accuracy :

Temperature and humidity $23^{\circ}\text{C} \pm 5^{\circ}\text{C}$ ($73^{\circ}\text{F} \pm 9^{\circ}\text{F}$), less than 80% RH (no condensation), following 60 min. warm-up after power is turned ON, after open/shut calibration, use of 9261 Test Fixture, measurement signal level 1 Vrms, measurement speed set to SLOW.

The various accuracy specifications presume that $0 < \pm 6^{\circ}\text{C}$ for R, $D \leq 0.1$ for C-D, $D \leq 0.1$ for L-D, $Q \geq 10$ for L-Q.

Q accuracy is defined by the calculation of 1/D.

Measurement range and accuracy differ with the used Test Fixture, measurement signal level and measurement speed.
